

# PENTCO

## DESIGNWARE: INTEGRAL PULL

Streamlined Function and Design customized for your space

*Integral Pull Standard Sizes - 18", 27", 36" (pictured) | Integral Pulls come in Silver Aluminum finish.*

*Pentco has 3 sizes of integral pulls and machines them to fit the specifications of each individual drawer or door. Included in the price is the slotting of one end of each drawer or door but the installation of the pull is completed and glued in by the purchaser as the ability of drilling for functional hardware would be impeded if the pull was installed prior. The Integral pulls are designed to be used with Pentco's Squareline door profile, and when installed allows for a 0.5mm overhang on either side of the drawer or door and approximately 1mm on the face which will vary, based on the final thickness and choices of laminates or veneers when combined with the substrates. The handle adds 2mm in height when installed. Please consider this measurement during your cabinet door installation.*
